Flint CPS Inks and Coatings with C2C Certified Material Health Certificate™

Our company has achieved a C2C Certified Material Health Certificate™ for a number of our Sheetfed Offset ink qualities and Waterbased Coatings classified in specific levels. All relevant products are listed on page 2.

In order to obtain the C2C Certified Material Health Certificate™, Flint CPS has been, and continues to be, subjected to a series of external audits covering, for example, the following criteria:

Innovation and quality as well as good design and the safe and potentially unlimited use of materials.

The C2C Certified Material Health Certificate is a stand-alone certificate issued to applicant companies for products that meet the rigorous, science-based requirements of the Cradle to Cradle Certified Product Standard Material Health category.

These requirements provide companies with a means of assessing, optimizing and verifying the safety and circularity of the chemicals and materials in a product or product group.

C2C Certified Material Health Certificate™ with reference to technical products (as printed matter) optimizes the involved components (such as printing inks) in the technical cycle, already in the design and production phases. The goal is to be able to recover these used products and ideally to be able to reuse them indefinitely.

This certification demonstrates Flint CPS' dedication to our sustainability goals, through environmentally intelligent design of our products, as well as our aim to support our valued clients with their own sustainability objectives.
